

ASSEMBLY INSTRUCTION - step by step

1

Content:

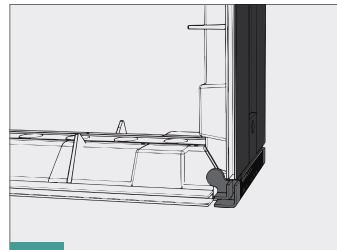

- 1: 1 x Light frame
- 2: 2 x Feet
- 3: 1 x Reinforcement Cross
- 4: 1 x Electric Wire

2

Before assembling the frame it is important that the unfolded frame is placed on a level surface for assembly. Do not move the frame until the Cross intersection is fully mounted on the frame.

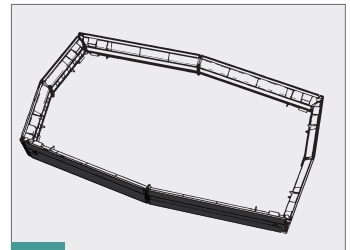

The orange corner module has to face up.

3

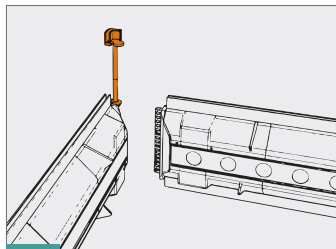

Start by unfolding the sides from corner to corner and form into a frame.

Start unfolding in the corner with the orange corner module.

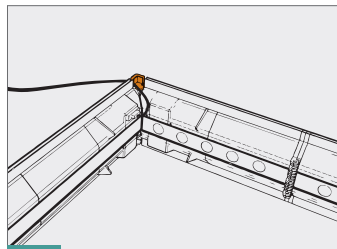

4

When all the corners have been folded out it has the shape of your frame.

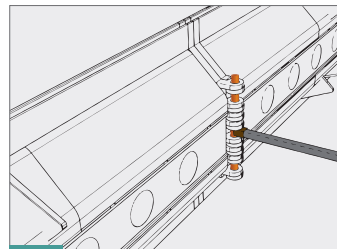

5

Pull up the orange plug and attach the two sides in the orange corner area to each other. Afterwards then push the orange plug back down to lock the two sides together.

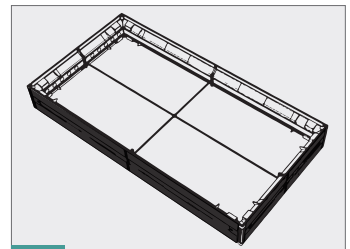

6

Insert the electric wire, and lead it through the small opening at the orange corner module.

7

Unfold the reinforcement Cross and mount it on the four joints located in the middle of all four sides of the frame.

8

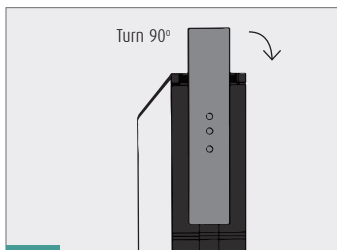

With the cross fully attached the frame is now stable and you can attach the banners. Start by attaching the banners on the side pointing upwards.

See instruction for attaching banners.

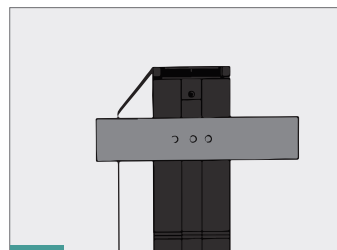

9

With the banner fully mounted on the upward side, you can now rotate the frame and attach the banner on the other side. You can also choose to raise the frame to upright position and attach the banner on the back, by standing.

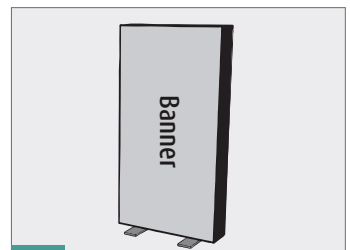

10

Attach the feet, by mounting them following the module length as if they are folded into the bottom of the frame, afterwards turn your feet 90 degrees to point out from the banner.

11

Attach both feet.

12

The light frame is now fully assembled and you can raise the Display to an upright position.

ATTENTION!

When dismantling the frame, it is important that the frame is placed on a level surface.

HOW TO

Put the banner into the frame in same order as shown below.
First the 4 corners, then the 4 midpart and then the rest.

This ensures an equal stretch on the entire banner.
