

Effective light

- quick setup

X-zoom light is super flexible and easy to mount. The lamp has a zoom function, so you can adjust the light focus by turning a discreet rubber band placed at the front edge of the lamp. This way you can easily control whether the lamp should focus on a specific area, or if you want a wider spread of light.

X-zoom light is mounted on a power circuit. With the circuit brackets the power circuit is mounted on the truss system by simply clicking it on. If you have multiple power circuits, you can combine them with a short connector cable from circuit to circuit. When your power circuits and lamps are mounted on your exhibition, you only need to plug in the power cable and turn on the switch.

The benefits are yours

- quick and easy setup
- visually nice with big effect
- flexible

Facts

Watt: 30 watt zoomable tracklight

Input voltage: AC220-240V, 50 Hz

CCT: 4000K

Light angle: 25°-60°

Luminous flux: 2400-2600lm

Power Factor: 0.9

CRI: 80
